

Abstract of the Disclosure

2 A wrench includes a hollow handle and a head. The hollow handle has a
3 first, necked end and a second end. The first, necked end has a diameter smaller
4 than that of the second end of the hollow handle. The second end of the hollow
5 handle has an integral end wall for at least partially closing the second end of the
6 hollow handle. The head and the necked end of the hollow handle are fused
7 together.
